## [Roll Forming Machine](#)

### **Roll Forming Machine**

Roll forming is a progressive motion process by bending cold metal with a series of roll stands or passes to achieve a desired shape. It has a number of advantages over other forming techniques.

#### **Advantages of Roll Forming Machine**

- 1.Great volume of parts is required
- 2.Ability of producing a variety of shapes with the same machine
- 3.Ability to produce parts of various lengths
- 4.Forming parts with various thicknesses
- 5.Integration of auxiliary equipments
- 6.Sufficient cost reduction

#### **Types of Roll Forming Machine**

- 1.C and Z purlin roll forming machine
- 2.Double-deck roll forming machine
- 3.Roofing tile roll forming machine
- 4.Door frame roll forming machine
- 5.Flooring roll forming machine
- 6.Aluminum roll forming machine
- 7.Custom roll forming machine

RONGAN specializes in manufacturing thermal insulation equipment which include rock wool production line, glass wool production line, ceramic wool production line, and material processing and handling equipment such as cranes, roll forming machine and plastic pipe machine, and etc.

For more information on roll forming machine, please feel free to contact us.
